Attribute Templates FAQs

Jennifer S - 2018-06-13 - in ESP Updates

Can I apply a template to both active and inactive products?

Yes, a template can be applied to either active or inactive products.

Can I have more than one color template?

Yes, you can create a template for shirts, another for mug products and yet another for pen colors. You just need to give each template a unique name.

What if I have a product with more colors than what is in the template? Can I edit the template?

You can create a new template and with other color values and if you no longer need the original template you can delete it.

If my product already has color values and I apply a template, will the template override the existing colors?

No. For example, my product has 3 colors- Blue, Red and Orange. I apply a template with the colors of Carolina Blue, Red, Orange, Brown and Purple. The system will look for exact matches and not add duplicate colors. However, existing colors will remain. After I add the template my colors are Blue, Red, Orange, Carolina Blue, Brown and Purple.
