

## The SKU and Inventory Tab

Jennifer M - 2018-10-26 - ESP Updates

To manage the SKU and Inventory information for a product, click on the SKU & Inventory tab.

The SKU, which stands for stock keeping unit, is a product identifier used to distinguish each variation of a product inventory control.

If the product has only one SKU number for all of it's attributes (colors, sizes, etc), add the SKU number in the Basic Details tab.

To add a SKU and inventory link for multiple variations, meaning that a product has multiple attributes and each attribute has its own inventory information, use the dropdowns to select one or two criteria to which the SKU and inventory is associated.

**Product criteria** (select one or two)

Make a selection... Make a selection... Show

Size

Product Color

For example, if the product has a unique SKU number for each color in each size, use this dropdown to select size and product color. Then, click on the Show button.

**Product criteria** (select one or two)

Size Product Color Show

Each combination of available sizes in all product colors will be listed. Type or paste the SKU numbers for each size and color into the SKU box.

You are able to filter the results using the checkboxes on the right.

You can provide an inventory link using a URL, use the Inventory Status dropdown to display the current stock for the product, as well as enter the quantity for products in stock.

The Clear All button resets all entered information.
