

## Analytics, Meta Tags and SEO

Tamika C - 2020-02-18 - Domains, Security & SEO

Search Engine Optimization (SEO) enables your site to be more visible to search engines (such as Google) and can improve the ranking of the page within the search results.

ESP Websites enables you to manage the meta tag information for all pages within your site, as well as use 301 redirects, link to Google Analytics, and employ Google Tag Manager.

### Learn more about SEO

#### Natural Search

In a natural search, web pages are ranked by which keywords are the most relevant to the words which were searched. This is normally controlled by an algorithm within the individual search engine.

#### Paid Search

There are a number of paid services available for this option. Paid services can include PPC/CPC (Pay per click/Cost per click), flat charges per ads, or any other service which requires a monetary charge for higher rankings on a search engine results page.

#### Control the Meta Tag Information

To manage the meta tag information, log into the ESP Websites admin, locate your site and click on the SEO button.

Enable [Google Analytics](#) Enable to gather site visitor statistics, i.e hit reports. This information is invaluable for creating an effective website that meets the needs of your customers.

Manage Google Analytics

For more information on using Google© Analytics, please review the [Help](#) section on their official website.

## Using Google Tag Manager with an ESP Website

### What is Google Tag Manager?

Google Tag Manager enables you to control the tags on your site without having to deal with coding. Tags are comprised of snippets of JavaScript code and tracking pixels, which are HTML code sections which are loaded when a user visits a website or opens an email. This information is useful for marketing and analysis on your site. For more information on how to use tags and the functionality of Google Tag Manager, please review the information available in the [Google Tag Manager Help Center](#).

### How Do I Enable Tag Manager for My Site?

If you do not have a [Google Tag Manager account](#), you can create one by clicking on the "Start for free" button on the Google© Tag Manager home page.

If you do have an account, you can link your Google Tag Manager account to your ESP Website by logging into the ESP Websites admin, locating your site and clicking on the Edit button.

Then, in the Websites Settings section, click on the Analytics option.

Check the "Enable Google Tag Manager Service" and enter your Container ID.

## Google Tag Manager

[Google Tag Manager](#) supports all tags and has easy-to-use turnkey templates for a wide range of Google and third-party tags — for web and mobile apps. Marketers can add or change their own tags as needed and a campaign can be underway with just a few clicks.

Enable Google Tag Manager Service

Container ID

After enabling the service and entering your Container ID, click on the Save button and then click on the Make Changes Live link.
